

Welcome to HyperGrow Organics! Home of the complete Mini Tea Brewer.

Now that you have your Hyper Grow Mini Brewer, you are just a few short steps away from making nutrient rich compost teas for your potted plants or garden.

I suggest that you put your mini brewer in a drip tray or other container as it may foam during the brewing process.

For a brew you will need:

- 1 (shy) gallon dechlorinated water
- 2 Tablespoons vermicompost
- 1-2 teaspoons chicken compost
- 1-2 teaspoons nutrient mix
- 1-2 teaspoons molasses (optional)

Directions:

1. Plug in pump and connect to blue air line. Insert the airline into the black airtube at the top of the brewer.
2. Add water to approximately 2" of the top of the brewer. If using chlorinated water, you can let the water bubble for several hours to bubble off chlorine.
3. Add vermicompost, nutrient mix and molasses to the brewer.
4. Let it bubble for 24-48 hrs.
5. At this time you may apply straight to plants or dilute 50/50 with dechlorinated water for larger applications and/or filter for application as a foliar spray.
5. Clean brewer with a soft rag or soft brush after each use. The black airline and tip may be removed for easier cleaning.
6. Watch your plants grow!!! 😊:D

Suggested Feeding Schedule per gallon for 10 week autoflower. Feed 1 qt of tea per plant diluted with 1 qt of water per week

Week	Molasses (optional)	Vermicompost	Chicken Compost	Amendment Blend	Bloom Boost
1	1 teaspoon	2 tablespoons	1 teaspoon	½ tsp	0
2	1 teaspoon	2 tablespoons	1 teaspoon	1 teaspoon	0
3	1 teaspoon	2 tablespoons	1 teaspoon	1 teaspoon	0
4	1 teaspoon	3 tablespoons	1 teaspoon	2 teaspoons	¼ teaspoon
5	1 teaspoon	3 tablespoons	2 teaspoons	2 teaspoons	1/2 teaspoon
6	1 teaspoon	3 tablespoons	2 teaspoons	2 teaspoons	1/2 teaspoon
